

# THE SUPERCONDUCTOR<sup>®</sup>+ & FX

The Superconductor line of cables are a well known, long-term reference to a worldwide audience of manufacturers, reviewers, and customers alike, offering music in a way never before realized

ULTRA-PURE METALS

FX INTERCONNECT

SINGLE SUPERCONDUCTOR+  
SPEAKER CABLE

## WIRED WITH ALUMILOY WIRE

Using JPS' Alumiloy<sup>®</sup> wire, our cables have an uncanny ability to bring about an emotional listening experience. Our cables' sonic character is like no other you have ever heard, very open and detailed, never bright but rather smoothly and evenly extending from top to bottom, with the ability to allow your system to offer lifelike and natural timbre and air, just as if you were there in the studio. Combined with the finest, very low noise shield and cable geometry in the industry, and very high quality materials inside and out, a complete line of cables worthy of carrying our trademark of **SUPERCONDUCTOR** goes beyond pure engineering principle, allowing total enjoyment.

FX BALANCED INTERCONNECT

FX DIGITAL AUDIO

SUPERCONDUCTOR+  
BIWIRE SPEAKER CABLE

Today, The Superconductor+ speaker cables and Superconductor FX interconnects take the stand as the latest versions of some of the finest cables available, while always offering their happy owners a trip to the original recording from the best seat in the house. Their designs ensure long term enjoyment in any system.

- The best performance to price ratio in high-end audio cabling!
- The quietest and most noise free cable and in any length, offering amazing low level detail and timbre.
- JPS' Alumiloy wire allows for clarity to the music never before heard, while never being bright or dull.
- Premium gold RCA and XLR connectors, and rhodium speaker cable terminations, all hand soldered.

"It seems to work in every system, with every amp, and with every speaker I've tried it with... Isn't that the way a near perfect conductor should act?... It simply conducts the energy in a fashion that is as perfect as I've had the opportunity to hear. It's as simple as that." ---Martin G. DeWulf- Bound for Sound
